3 objectives to reach

Why this project ?

1. Ambitious and realistic idea

2. Lasting impact

3. Inspiring purpose

© COmind

Have an ambitious yet realistic idea

Every project starts with an idea, the conviction of having a market opportunity related to a technology or a process, or a relevant response to unsatisfied wants.

Whatever the origin of the idea, it must stand out from existing solutions and be of real interest.

To be realistic, it must also be achievable within a reasonable timeframe and with controllable resources.

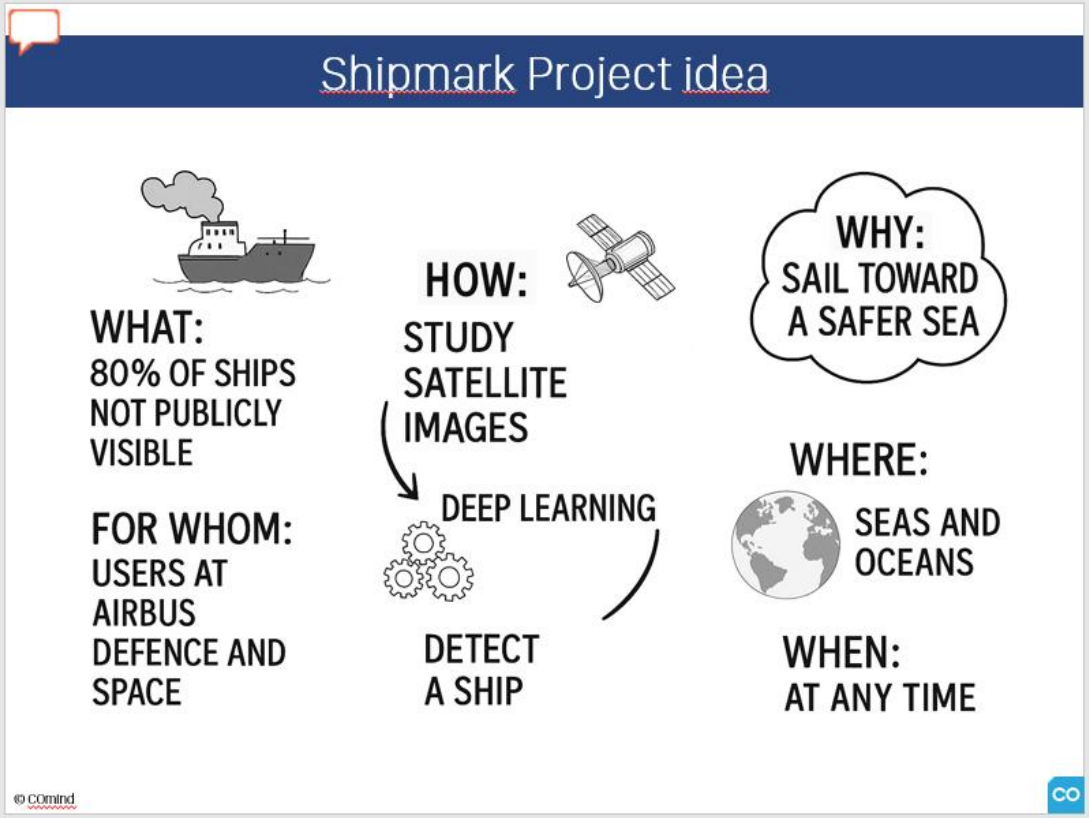
Shipmark Project idea



Erik EMOTTE

EE As with the Shipmark project, you need to explain:

- What is the initial observation behind your idea? (What)
- Who is concerned? (Who)
- Where does it take place? (Where)
- When does it happen? (When)
- What actions do you plan to implement? (How)
- What result do you expect? (Why)

To present your project, you can create a sketchnote — a visual and concise representation of your idea.

First objective to reach

Is your project ambitious and realistic ?

1. Ambitious and realistic idea

2. Lasting impact

3. Inspiring purpose

© COmind

Make a lasting Impact

Since the Brundtland report of 1987 and the acceleration of climate change, sustainable development has become a crucial issue.

Any project must consider the impact it may have on society and the environment, in terms of :

- positive economic impact,
- sustainable ecological impact,
- fair and positive social impact.

The more impact a project has, the more support it will receive.

Shipmark Project impact

Shipmark Project impact

PEACE, JUSTICE AND STRONG INSTITUTIONS

Monitor ports and seas to ensure national security and identify maritime pirates.

CLIMATE ACTION

Detect illegal oil discharge/ballast water release and abandoned vessels.

LIFE BELOW WATER

Protect marine ecosystems by fighting illegal fishing.

© COmind

Erik EMOTT

EE As with the Shipmark project, you can explain the impact of your project using the United Nations Sustainable Development Goals (SDGs), specifying the specific goals your project addresses.

There are 16 SDGs, focusing on economic, social, and/or environmental issues.

Second objective to reach

Will your project have a lasting impact ?

1. Ambitious and realistic idea

2. Lasting impact

3. Inspiring purpose

© COmind

Formulating the purpose of a project

The purpose of a project is the reason why a project is carried out. It is the reason for investing time and money in the project.

It gives meaning to the action in the start-up phase and provides a clear direction throughout the project.

It helps guide the project in times of doubt and bring stakeholders together around a shared ideal.

© COmind

Purpose of the Shipmark Project

Purpose of the Shipmark Project

SHIPMARK

Strengthening the management and security of maritime areas to navigate toward a safer sea.

© COmind

Erik EMOTTE

EE As with the Shipmark project, formulating the purpose of your project allows you to convey its value and ambition in a single sentence.

You should explain what you will concretely act upon — for example, Shipmark aims to strengthen the management and security of maritime areas — and the ideal you are striving for, which for Shipmark is to navigate toward a safer sea.

Third objective to reach

Is your purpose inspiring ?

1. Ambitious and realistic idea

2. Lasting impact

3. Inspiring purpose

© COmind

Target

1 Purpose

2 Target

3 Issue

4 Solution

This project, for whom ?

© COmind

2 objectives to reach

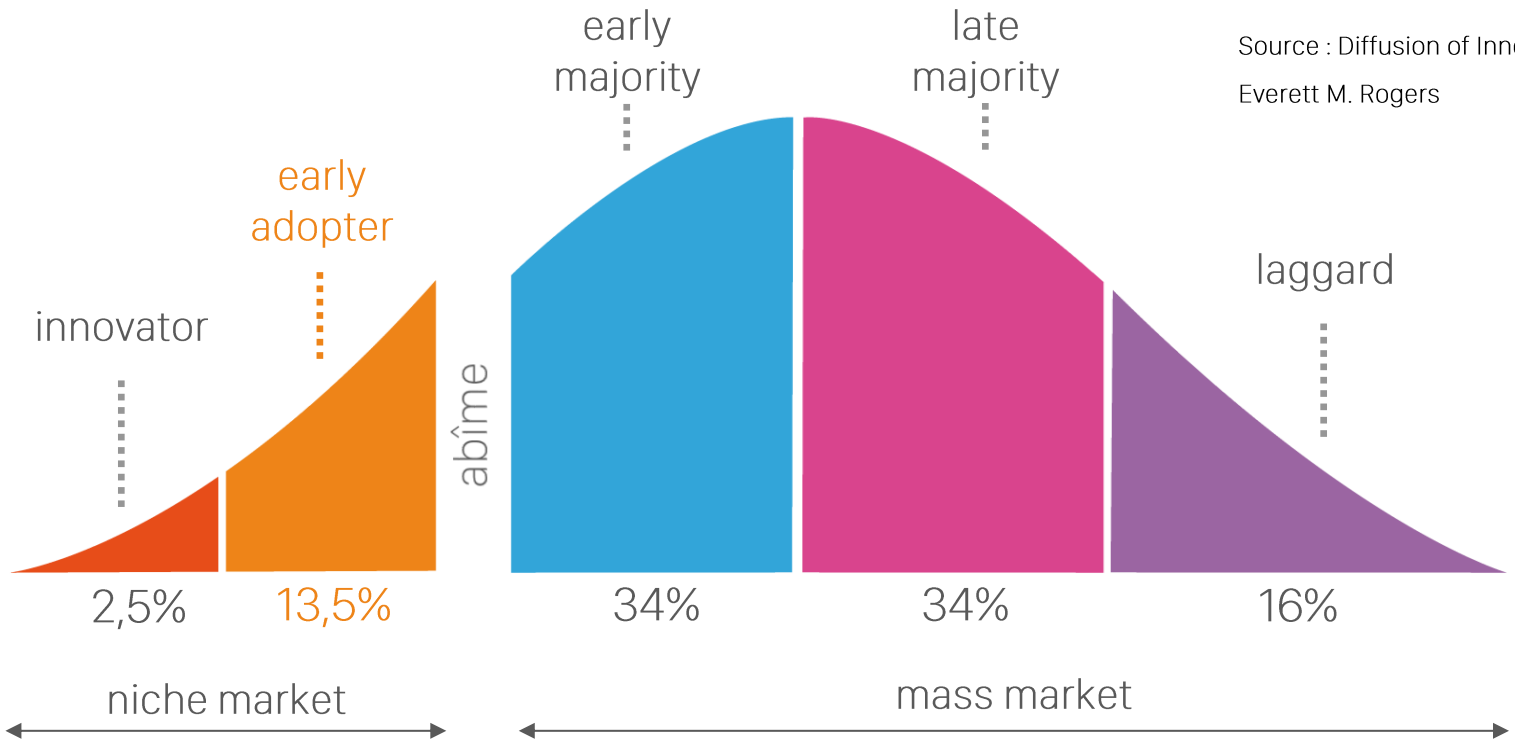
This project, for whom ?

1.
Targeted
early adopters

2.
Early adopters
ready to be
contacted

© COmind

The diffusion curve of innovation



Innovators : those who always want to be the first to try something new.

Early adopters : those who consider the solution essential.

Early and late majorities : those who find the solution interesting, but not necessarily essential.

Laggards : those who don't see any interest in the solution.

© COmind

Target the early adopters

At the start of the project, priority should be given to early adopters, the beneficiaries who are ready to adopt the solution now.

They can be identified because they are actively looking for a solution :

- either because the project is directly linked to their activity,
- or because they have a sensitivity or passion linked to the project.

The advantage of targeting early adopters is that these are people who are ready to commit to the project.

© COmind

Shipmark Project early adopters

Shipmark Project early adopters

- Airbus Defence and Space, which will use the solution to respond to requests for maritime services.
- La Marine Française (The French Navy) which needs to improve the monitoring of maritime activities.
- CROSS (Regional Operational Surveillance and Rescue Center), which needs to respond quickly in case of danger.
- NGOs such as Greenpeace or Sea Shepherd, which aim to establish protected areas against poaching.

© COmind

Erik EMOTTE

EE As in the Shipmark example, the goal is to identify the early adopters — the first potential beneficiaries of the solution, ready to adopt it quickly.

These early adopters may have different profiles, but they share one thing in common: they are actively looking for a solution to the problem addressed by the project — in Shipmark's case, the detection of ships that are not publicly visible.

Before contacting them, it is essential to understand their motivations so you can adapt your message and increase your chances of capturing their interest.

© COmind

First objective to reach

Have you identified your early adopters ?

1.
Targeted
early adopters

2.
Early adopters
ready to be
contacted

© COmind

Get in touch with early adopters

Sharing a passion, a cause or a profession linked to the project, early adopters are generally part of the same community.

Its members share common affinities, values and practices that unite them.

If the project interests them, they talk about it among themselves, influencing each other to the point of being ready to support it at the outset, when it has everything to prove.

Erik EMOTTE

EE

Once your early adopters have been identified, the next step is to find specific people within these organizations to get in touch with.

To do this, you can use social networks such as LinkedIn or Facebook to identify relevant profiles. In some cases, a phone call to the organization's headquarters can also help you obtain an email address or phone number.

In the Shipmark example, one or more contacts were identified for each organization, along with their LinkedIn profile and contact details.

This targeted, qualified list makes it possible to quickly connect with people likely to be interested in the project.

Shipmark Project message

Shipmark Project message

Subject: Meeting Request – Shipmark Project

Dear Mr./Ms. X,

We are students at the engineering school Efrei working on Shipmark, a project using satellite imagery and AI (deep learning) to detect vessels that are not publicly visible.

We believe this topic may be of interest to you and would love to discuss it briefly.

Would you be available next week ? For instance:

- Monday 11/02 (afternoon)
- Tuesday 11/03 (anytime)
- Wednesday 11/04 (morning)

Thank you for your time and consideration.

Best regards,

The Shipmark Team

© COmind

Erik EMOTTE

EE

In this example, the Shipmark project's message is addressed to professionals whose role is to detect vessels that are not publicly visible in order to prevent illegal activities or intervene in emergencies.

Presenting the project's key challenge right in the first sentence allows the recipient to immediately understand the relevance of the project.

The next step is to quickly propose a time for discussion, so you can speak with them directly and clearly present how the project can benefit them.

© COmind

Second objective to reach

Are you ready to contact early adopters ?

1.
Targeted
early adopters

2.
Early adopters
ready to be
contacted

© COmind

Collaborative mindset

Thank you for your attention
